

My JavaFX Application

How to Run

Windows:

Double-click `run.bat`

Linux/Mac:

```
chmod +x run.sh
./run.sh
```

Manual (if needed):

```
java --module-path "dependency" --add-modules javafx.controls,javafx.fxml -jar
Project-1.0-SNAPSHOT-with-dependencies.jar
```

Requirements

- Java 17 or higher
- No additional installations needed - JavaFX and all other dependencies are included

Contents

- `Project-1.0-SNAPSHOT-with-dependencies.jar` - Main application JAR file
- `dependency/` - Dependency JAR files
- `data/` - Application data files
- `run.bat` / `run.sh` - Launch scripts
- `docs` - Documentation
